Mojito-Beermix

Lime - the green relative of the lemon

Limes taste very sour and slightly tart and are therefore primarily used in the form of juice and syrup as an ingredient in many popular cocktail recipes. And let's be honest: What would a summer mojito or caipirinha be WITHOUT limes?

Ingredients in the beverage compound:

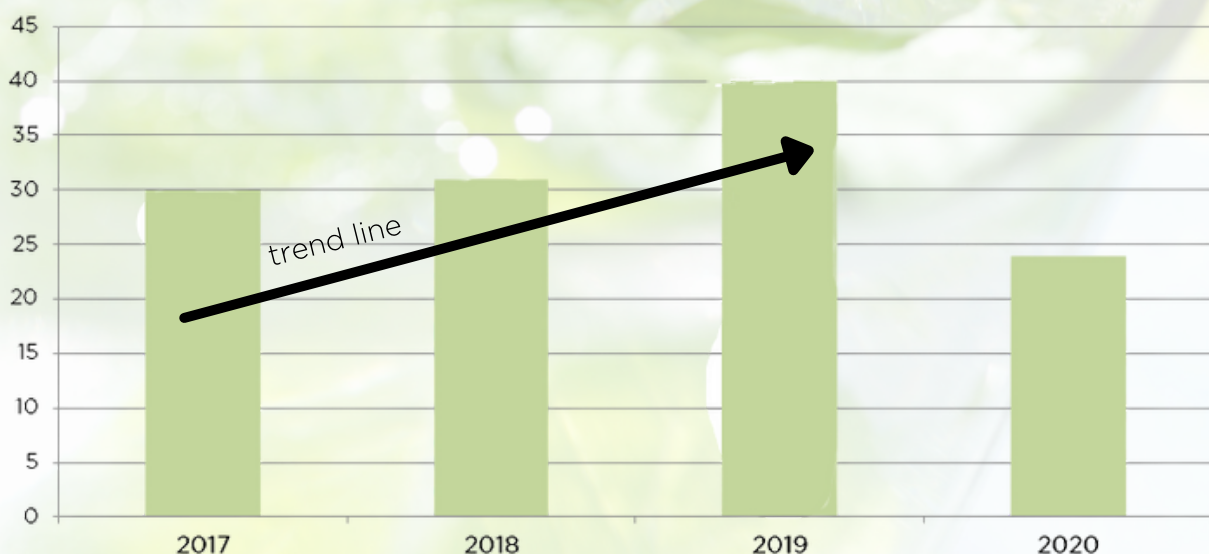

Water, sugar, lime juice concentrate, acidifier: citric acid (or E 330), natural flavouring, colouring foods: spirulina concentrate and safflower concentrate

Fun Fact:

1 lime contains about twice as much fruit juice as a lemon.

Lime as a flavour in beer mix drinks is becoming more and more popular - this is also reflected in the global launches:

Source: Mintel GNPD

The decrease in 2020 is due to the corona pandemic.

Due to the pandemic, there were generally fewer product launches in 2020.
